

Groww MF Prime — Evidence Summary

Edition 002 · Prepared 28 July 2026 · Independent research, not affiliated with Groww

Locked research question: How can Groww MF Prime provide useful personalised mutual-fund guidance while making plan type, long-term cost, recommendation logic, consent, and switching consequences unmistakably clear to users?

01 · The thesis

Groww MF Prime does not appear to have a demand problem — personalised guidance is genuinely wanted by a meaningful subset of users. The open question is decision clarity: whether plan type, long-term cost, recommendation logic and reversibility are unmistakable at the exact moment a customer opts in — not whether Groww documents these mechanics somewhere in its Help Centre. It already does.

02 · What's verified (official / regulatory sources)

Finding	Confidence
MF Prime launched 9 Jul 2026 after a January 2026 pilot; opt-in; routes future MF investments to regular plans	High
Existing direct holdings continue unaffected; reversal to Classic is possible “at any time” (per Groww)	High (claim); operational meaning contested
SEBI frames regular plans as commission-funded/beginner-oriented and direct as commission-free/choice-conscious	High
Groww’s Help Centre already documents switching mechanics: redeem-and-rebuy, possible exit load	High (capital-gains tax, external SIPs need se
Real fund data (3 funds): direct-vs-regular expense-ratio gap is 0.51–0.82 percentage points — narrow	High (than the “up to 1.5%” marketing ceiling
Over a hypothetical 10-year, ₹1,00,000 illustration, that gap compounds to roughly ₹11,000–17,700	High (for the entire duration, not a return predic
Scripbox is the closest competitor precedent (dual commission/fee advisory model); most others remain	Moderate

03 · What real Prime activators say (~10 reviews of ~200,000 scanned, Direct Evidence, paraphrased)

Several reviewers describe selecting Prime and then being unable to place any direct-plan order at all — a stronger claim than “future investments route to regular,” and one that needs verifying against the live app UI. Reversal is described as costly (tax, exit load) or hard to locate, not absent — consistent with Groww’s own documented mechanics. Several reviewers say they redeemed holdings and moved to a competitor after the experience. Importantly, this cohort clearly understands the direct-vs-regular cost distinction — they are angry about losing the choice, not confused about what the terms mean.

Evidence-discipline note: this cannot support any claim about how many users are affected. The dataset is ~200,000 reviews of the broader Groww app; only ~10 are MF Prime-specific.

04 · Open contradiction to resolve before publication

Groww’s announcement says reversal is possible “at any time.” A secondary press report and at least one public forum comment describe a limit of once per six months. The evidence ledger rates the 6-month claim as Moderate confidence, wording unverified. Do not publish either version as settled without checking the live in-app flow.

05 · Claims explicitly rejected

Rejected — “MF Prime hides its fees or switching consequences.” Groww’s own Help Centre already documents the mechanics; the real, narrower question is timing and prominence at the decision point, not existence.

Not established — “Most Groww users are confused by MF Prime.” Only ~10 reviews are Prime-specific, and that cohort shows clear cost literacy.

Not supported — “MF Prime is designed to mis-sell customers.” No evidence establishes intent; the documented fact is only that Groww’s revenue model differs between direct and regular plans.

06 · Priority experiments

Experiment	Confidence	What it tests
Advice Cost Preview	High	1/5/10-year Direct-vs-Regular cost projection with real fund data before activation c
Persistent Prime/DIY Mode Indicator	High	Always-visible current-mode label so mode is never discovered only after money m
Recommendation Evidence Card	Medium	“Why this fund” reasoning shown per recommendation, with alternatives considered
Reversible Consent Journey	Medium-High	Concrete walk-through of what changes, and what tax/exit-load/SIP consequences

07 · What's still missing

1. Live screenshots of the actual MF Prime activation, in-flow disclosure and switch-back screens.
2. Moderated comprehension interviews with 5–8 real users (protocol drafted, ready to run).
3. Official-page verification of each competitor's current pricing/plan-type mechanics.
4. A second, independent adversarial audit.

Every certainty rating touching actual in-app UI wording, prominence, or real user comprehension remains Low or Very Low until these are complete — this is the single most-repeated finding across the full research package.
